Master Export Pro

Simplified MVP — Export Business Management ERP

1. Product Overview

Master Export Pro is an export business management software designed to manage the essential export workflow in one place.

Main objective: Manage an export order from customer enquiry → quotation → order → shipment → invoice → payment.

2. Core Export Workflow

3. MVP Modules

Dashboard

Quick overview of the business: active orders, pending shipments, outstanding payments, total sales, and recent activity.

Customers

Manage buyer/company information such as company name, contact person, country, email, phone, address, currency, and payment terms. Customer pages should also show related orders, invoices, payments, and shipments.

Products

Maintain a simple product master containing product name, SKU, description, HS Code, unit, price, and available stock.

Sales

Combine Enquiries, Quotations, and Sales Orders into one sales area. Track an enquiry, create a quotation, send it to the customer, and convert an accepted quotation into a Sales Order.

Shipments

Track the export delivery process, including origin, destination, transport mode, container number, ETD, ETA, and shipment status. Attach important export documents to the shipment.

Invoices & Payments

Generate Proforma and Commercial Invoices and track payment status: Unpaid, Partially Paid, and Paid. Show order value, amount paid, and remaining balance.

Reports

Keep reporting simple in the MVP: total sales, sales by month/customer, pending/shipped/delivered orders, paid/outstanding payments, and basic profit.

Settings

Manage company information, users, currencies, payment terms, and other basic application settings.

4. Dashboard

KPI	Example
Active Orders	24
Pending Shipments	8
Outstanding Payments	$45,000
Monthly Sales	$185,000

5. Sales Module

Enquiry → Quotation → Sales Order

The Sales module is the heart of the MVP. Users should be able to create an enquiry, prepare a quotation, track its status, and convert an accepted quotation directly into a Sales Order.

Quotation fields: Customer, products, quantity, unit price, currency, Incoterm, freight, payment terms, validity, and total amount.

Sales Order status: Confirmed → Preparing → Ready to Ship → Shipped → Delivered → Completed.

6. Sales Order — Central Entity

Every confirmed export transaction should have one central Sales Order. Other information should be linked to it instead of being entered repeatedly.

Order Information	Example
Order	SO-1024
Customer	ABC Trading LLC
Destination	Dubai, UAE
Product	Product A — 5,000 units

Order Value	$50,000
Advance	$15,000
Balance	$35,000

7. Shipment Module

The Shipment module manages the physical export delivery for a Sales Order.

Information: Shipment number, order, customer, origin, destination, transport mode, container number, carrier, ETD, ETA, tracking number, and documents.

Status: Preparing → Customs → Shipped → In Transit → Delivered.

8. Invoices & Payments

The MVP should support two main invoice types: **Proforma Invoice** and **Commercial Invoice**.

Payment tracking should show order value, amount received, balance, due date, payment method, and payment reference.

Payment Summary	Amount
Order Value	$50,000
Paid	$15,000
Balance	$35,000
Status	Partially Paid

9. Basic Reports

• Sales: total sales, monthly sales, sales by customer.

• Orders: pending, shipped, delivered, and completed.

• Payments: paid, partially paid, outstanding, and overdue.

• Profit: Sales – Product Cost – Shipping Cost – Other Expenses.

10. Final MVP Navigation

Main Navigation	Purpose
Dashboard	Business overview
Customers	Manage buyers
Products	Manage products
Sales	Enquiries, quotations, orders
Shipments	Track export deliveries
Invoices & Payments	Billing and collections
Reports	Basic business reporting
Settings	System configuration

11. Key Product Principle

Enter information once and reuse it everywhere. Customer information should flow into the enquiry, quotation, Sales Order, shipment, invoice, payment, and reports. Product, quantity, price, currency, destination, and payment terms should be carried forward automatically.

12. MVP Scope

Keep the first version focused. Do not build a complex inventory, production, quality-control, procurement, or advanced analytics system initially. Once the core workflow is stable, these can be added as Phase 2 features.

Master Export Pro — Core MVP: Customer → Enquiry → Quotation → Sales Order → Shipment → Invoice → Payment → Completed
